# Archiflow Update 9.8.1

## 1. Changelog

Archiflow has been updated , here's the list of the changes:

- "Firma Documenti" workflow: from now the workflow accepts .PDF and .P7M documents. If the document is a .PDF it will be processed as usual, if the document is .P7M Archiflow will check if the person in charge of signing and the signature already on the document correspond. If they don't the signer will be able to add a signature and forward the activity.  
In the .P7M case there will be no annotations on the file after the sign process (eg. "Document signed by XXX on XX/XX/XXXX) because it would invalidate the document itself.
